

Medical Device Management and Asset Tracking

Build your application the way you like it.

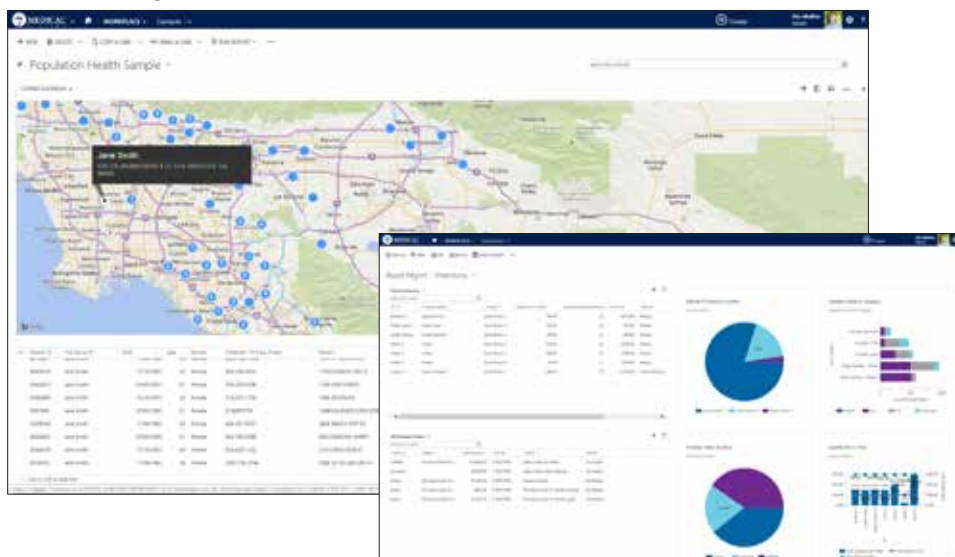

Align IT expenditures with business objectives, and quickly implement your own sophisticated, feature-rich medical device management and asset tracking applications configured specifically to meet your workflow requirements.

X-HIS® uses a flexible service-oriented architecture to ensure reliability and interoperability—all at a price you can afford. X-HIS is the fastest, easiest way to increase efficiency—by automating workflows, saving you time and money.

Medical Device and Data Management

Asset Tracking and Location

Medical Device Data Management

Collect and store structured clinical data from any device in a health data repository (HDR). Once in the HDR, data can be stored, forwarded or analyzed for actionable intelligence and informed decision making.

Asset Tracking

Track the location of any device or physical asset using any number of technologies:

- RFID
- Barcodes
- NFC
- GPS
- Wi-Fi
- Infrared
- Bluetooth

Build your application. Get started today.
